

Treat the Environment Professionally

MGB PRO-series

Increased demands.

The industry requirements for waste and recyclable containers have increased significantly in the past years. At the same time the lifting techniques and devices, together with the need to separate and recycle household and industry waste, have led to increased demands for versatile and reinforced waste containers.

To meet the demand Helesi introduced the new PRO-Series of 2-wheel waste containers manufactured by new moulds using the latest technology in injection molding. The PRO-Series aims to support all requirements of the waste management industry.

Profiled sides

Solid and re-enforced sides for extra durability, heavy use and increased stability.

Alternative axle positions

Mounted solutions allow the assembly of axles in different heights depending on the wheel size.

Clever axle positioning

During transport the axles are fixed in position next to the bin-handle. This allows convenient stacking and a quick visual inventory control.

Smooth surfaces

The smooth, rounded surfaces of the bin, allow easy cleaning, hygiene and prevent odors to derive from residuals.

Robust design

The robust design of all 4 corners, provides high pressure and shock resistance on all sides.

Supporting edge

The special design of the edges prevents rain water or other liquids entering the bin.
